Object : Problem with my M3

I bought last year (December 2004) an iaudio M3 from <http://suntecint.com> (also named shopsuntec.com), but now the site is down so i can't get through the person who sold me the player.

After several month of use, my M3 is down without any reason . I'm not able to use its mp3 player functions but i can use it as an HDD. When i turn the M3 on, i'm not able to listen to music or radio and the remote control does'nt display anything. I tried to use the reset button several times without any result. I think it's an hardware problem.i tried also to format the hdd, put a new firmware: same problem.The player does'nt work with or withtout the remote connected but i don't know if the remote still works, because sometimes it displays just black lines on the screen, so i joined it to the package

You'll find with this letter the whole original package containing (suspected) defected components : The player, the remote; and also a proof of purchase. It's the paypal invoice i received from suntecint.com.

Thanks in advance.
